

Huber Concepts **STAGED-BREAK®** Trigger For Remington 700 Rifles & Clones

☒ TRADITIONAL ☐ EXPONENT ☐ SAFETY None

21 August 2018

Serial # HC 7A3245

☒ RH

☐ .50Cal. EDM

☒ Subdued ☐ Stainless Steel

☐ LH

☐ .50Cal. McMillan

☐ 2-Stage ☐ Single Stage

☐ Trigger Guard (Bottom)

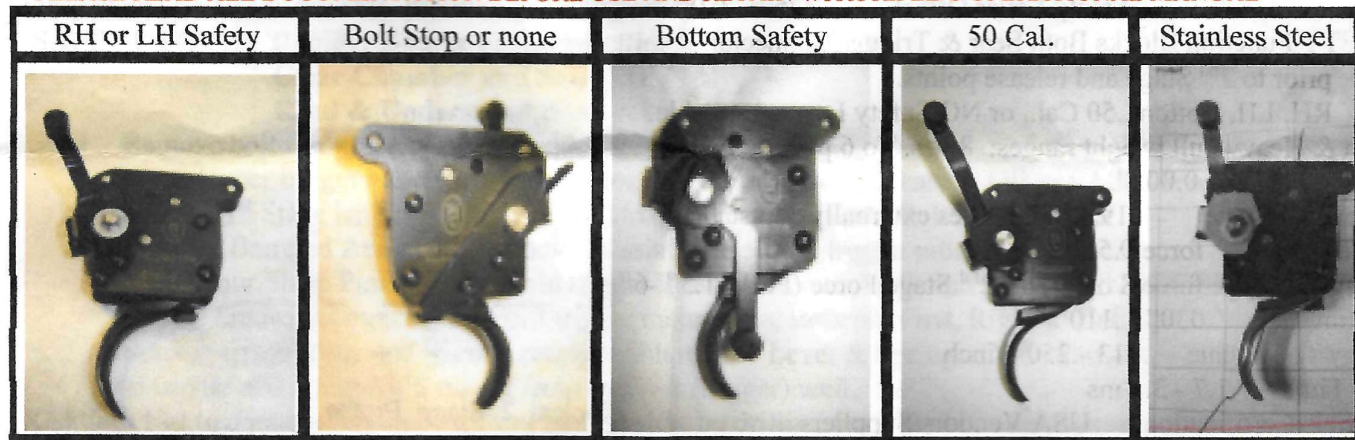

Peak Weight 2.334# #

☐ OEM REM Bolt-Stop

☐ Straight Shoe

PLEASE READ ALL DOCUMENTATION BEFORE USE AND RETAIN WITH RIFLE'S OPERATIONAL MANUAL

For more than 300 years, military doctrines dictated at least 7# trigger pull weight and long creep. In high stress combat situations in all weather and physical conditions, the intent to slow soldiers rate of fire to improve presence of mind and accuracy in shot. Contemporary snipers prefer 2 stage triggers releasing between 2 # - 3 ½ #. Hunters use 1 & 2 stage 3- 5# triggers. Long range match shooters employ single stage, short/zero creep triggers breaking as low as several ounces pressure.

In The Real World- man is the platform for accurate performance of a mechanism whose sole function is ballistic projectiles. TIME is ½ of your ballistic equations in range & flight time, environment and physical factors and preparations to hit the target. Every muscle in the body imparts force to the rifle thru the shot process. Heavy forces applied to the rifle keep aim point in motion seeking center on target. Aim is never dead-on for more than a few milliseconds and excess trigger force always moves the gun off target. Sympathetic muscles adjacent, heartbeat, respiration and general physical state also affect firing discipline in shot performance. Heavy triggers typically move aim off target at time of firing.

Huber Concepts employs the latest computer technologies, ergonomics, mathematics, advanced manufacturing methods and motion physics to provide the best triggers for you & your firearm.

Our U.S. Patents - #6,681,511; #7,051,467; #7,430,827; #8,132,349; #8,677,665; #9,255,750 and other Patents Pending cover our use of ball bearings, metallurgy and methods that have been qualified with the Dvorak Trigger Scan to develop faster lock-times, lower energy-to-actuate, and short travels. The result is better shot management for tighter shot groups, improved self-confidence and discipline at longer ranges. Stage weights and timing custom set at the factory. Dvorak trigger profiles documented and each trigger serial numbered. Our SAFETY is available RH, LH, Bottom, .50 Cal, & None. Safety blocks both the sear and the trigger.

Actions function and fit to: Remington 700 Series S/L, M24, M40, 40X, ArmaliteAR-30, Surgeon Rifles, Defiance, Elisi, G A Precision, American Precision Arms, Big Horn, Lawton, Jense, Stiller, BAT, Badger, Phoenix Rifle, Accuracy International 99AW, Ashbury TCR, ASW338LM, Cheytac, McMillan G30 & TAC-50, Genesis, PGW Timberwolf, Kelbly, Coyote, EDM and others.
